

Duration: 1 Day
Course Code: SSH43

Course Description:

An Anaphylactic shock, or anaphylaxis, is a life-threatening, serious allergic reaction to an allergen such as food substances or insect stings. If it is not treated appropriately, it may cause death. This training is for qualified First Aiders and Emergency First Aiders to enable them to recognise and treat anaphylaxis safely and effectively.

When administering a medication, it is important to recognise and differentiate between allergic reactions and the potentially life-threatening anaphylactic reactions immediately. It is also essential to determine whether the individual has had an allergic or anaphylactic response to the medication in the past or prior to administration.

Who Should Attend Immediate Management Of Anaphylaxis Training?

This course is suitable for all First Aiders and healthcare professionals, as well as those in a high risk environment where such medication is available.

Benefits From Attending The Training:

- You'll be able to describe anaphylaxis
- You'll be able to identify triggers for anaphylaxis

Course Contents:

Life threatening problems associated with the:

- Airway
- Breathing
- Circulation
- Disability (Neurological status)
- Exposure (Skin and mucosal changes)
- The need for an early call for help

Treatment for anaphylaxis:

- Non re-breather mask
- Removal of trigger
- Auto-injector
- Key features of adrenaline-auto injectors
- Conduct an initial assessment using the ABCDE approach
- Recovery position
- Resuscitation for adult and/or child
- Recognise the need to use an auto-injector
- Demonstrating the safe use of an adrenaline auto-injector using a training device
- Safely disposing of sharps according to agreed ways of working
- Handing over the casualty to a medical professional
